Cover and green crops are the gardener's best friend during the colder months. We have available to plant: mustard, lupins, oats, barley, peas, beans etc. Cereals, Lupins and Clover don't just look nice, they are also able to improve your soil in a natural way.

Deep rooting plants will help to improve the soil, which leads to better water penetration, aeration and reduction of soil erosion.

Weeds are suppressed when competing for light and space. Legumes repair and conserve nitrogen with the help of bacteria.

The fertility of the soil will increase when the crops are turned back into the soil.

The best time to be planting Garlic cloves is mid May through to late July.

- Break up each bulb into their individual cloves. It's the cloves that you plant, not the whole Bulb. Don't peel the cloves.
- Ensure that the area you have selected is free draining, has plenty of sun, and has all of the nutrients already added in (Sheep pellets, Compost etc)
- Bury each clove to a depth of around 5cm below the surface of the soil.
- Space your Garlic cloves around 15cm apart .

Shoots will begin to emerge around a Month after planting. Keep your garlic as free from weeds as possible—Garlic need as much nutrients as possible and dislike competing with weeds!

KINPACK Sheep manure

KINPACK fertiliser is produced from sheep daggings and is machine blended, resulting in a consistent powdered natural fertiliser.

Nothing is added during the crushing or bagging process.

Duck Season

We have a variety of grains to suit your needs available.

Duck in and see the team
